Data Engineer building end-to-end data platforms that scale. I design and own Medallion (Bronze/Silver/Gold) architectures on Azure Data Factory and Microsoft Fabric — from ETL/ELT pipelines and PySpark transformations to the data-quality frameworks that keep pipelines trustworthy as they grow. Comfortable across the modern data stack: SQL, Spark, Databricks, and cloud platforms (Azure, AWS), with reporting delivered through Power BI and Tableau. I care about datasets teams can build on — validated, documented, and easy to extend.

Technical Skills

Cloud & Platforms: Azure (Data Factory, SQL Database, Key Vault), Microsoft Fabric, Databricks (basic), AWS fundamentals

Data Modeling & ETL/ELT: Pipeline design, dimensional modeling (star schema), OLTP & OLAP, Medallion architecture, data quality frameworks

Databases: PostgreSQL, Azure SQL Database, SQL Server, relational & NoSQL

Processing & BI: Spark, Power BI, Tableau, Excel

Programming: Python, SQL, TypeScript, C#, Git, API integration

Professional Experience

Data Engineer

Jul 2025 – Present

EPAM Systems — Lviv, Ukraine

- Built and owned **8 production ETL/ELT pipelines** in Azure Data Factory, processing **10M+ rows** from 4 source systems into a unified Lakehouse.
- Structured ingested data across Bronze/Silver/Gold (Medallion) layers, delivering governed, analytics-ready datasets for downstream teams.
- Wrote and optimized SQL to power internal reporting and analytics use cases.
- Partnered with a cross-functional team on sprint timelines, using a Git-based workflow to ship iterative pipeline improvements.

Projects

Data Quality Monitoring System for Data Lakes — PySpark, Microsoft Fabric (Bachelor's Thesis)

A PySpark data-quality framework running 18 automated validation checks across 6 dimensions (completeness, accuracy, consistency, timeliness, validity, uniqueness) on a Medallion Data Lake; logged results and flagged anomalies for ongoing monitoring.

Sales & Inventory Tracking System — Microsoft Fabric, Spark, Azure SQL, Power BI

Built end-to-end Spark pipelines across Bronze/Silver/Gold layers, feeding Power BI dashboards for stock-level monitoring and reorder decisions.

Open Data ETL/ELT Pipeline — Azure Data Factory, SQL

Automated ingestion of large open datasets into Azure SQL Database with staging tables and validation rules catching missing values and duplicates.

School Management System — PostgreSQL, TypeScript

Designed a normalized 10+ table relational schema with role-based access control (RBAC) across 4 user roles via Clerk authentication.

Education

Bachelor's Degree in Software Engineering

Sept 2022 – Jun 2026

Lviv Polytechnic National University — Lviv, Ukraine

- Thesis: PySpark-based data quality monitoring system for Data Lakes.
- Coursework in SQL, relational database design, and ETL pipeline development, applied directly in EPAM role and projects.

Languages & Soft Skills

Languages: Ukrainian — Native · English — B2

Soft skills: Analytical & critical thinking · Attention to detail · Adaptability & fast learning · Team collaboration
